

**Assignment Code: DS-AG-005**

# Statistics Basics| Assignment

**Instructions:** Carefully read each question. Use Google Docs, Microsoft Word, or a similar tool to create a document where you type out each question along with its answer. Save the document as a PDF, and then upload it to the LMS. Please do not zip or archive the files before uploading them. Each question carries 20 marks.

**Total Marks:** 200

**Question 1:** What is the difference between descriptive statistics and inferential statistics? Explain with examples.

**Answer:**

**Question 2:** What is sampling in statistics? Explain the differences between random and stratified sampling.

**Answer:**

**Question 3:** Define mean, median, and mode. Explain why these measures of central tendency are important.

**Answer:**

**Question 4:** Explain skewness and kurtosis. What does a positive skew imply about the data?

**Answer:**

**Question 5:** Implement a Python program to compute the mean, median, and mode of a given list of numbers.

```
numbers = [12, 15, 12, 18, 19, 12, 20, 22, 19, 19, 24, 24, 24, 26, 28]
```

*(Include your Python code and output in the code box below.)*

**Answer:**

***Paste your code and output inside the box below:***

**Question 6:** Compute the covariance and correlation coefficient between the following two datasets provided as lists in Python:

```
list_x = [10, 20, 30, 40, 50]  
list_y = [15, 25, 35, 45, 60]
```

*(Include your Python code and output in the code box below.)*

**Answer:**

***Paste your code and output inside the box below:***

**Question 7:** Write a Python script to draw a boxplot for the following numeric list and identify its outliers. Explain the result:

```
data = [12, 14, 14, 15, 18, 19, 19, 21, 22, 22, 23, 23, 24, 26, 29, 35]
```

*(Include your Python code and output in the code box below.)*

**Answer:**

**Question 8:** You are working as a data analyst in an e-commerce company. The marketing team wants to know if there is a relationship between advertising spend and daily sales.

- Explain how you would use covariance and correlation to explore this relationship.
- Write Python code to compute the correlation between the two lists:

**advertising\_spend = [200, 250, 300, 400, 500]**

**daily\_sales = [2200, 2450, 2750, 3200, 4000]**

*(Include your Python code and output in the code box below.)*

**Answer:**

**Question 9:** Your team has collected customer satisfaction survey data on a scale of 1-10 and wants to understand its distribution before launching a new product.

- Explain which summary statistics and visualizations (e.g. mean, standard deviation, histogram) you'd use.
- Write Python code to create a histogram using Matplotlib for the survey data:

**survey\_scores = [7, 8, 5, 9, 6, 7, 8, 9, 10, 4, 7, 6, 9, 8, 7]**

*(Include your Python code and output in the code box below.)*

**Answer:**
